

## MOORING ROPE STOPPER S12

S12 stopper with HMPE fibers, 12 strand construction and extra coating for gripping.

### BENEFITS

- Excellent grip
- Very high strength
- Very easy to hand due to small diameter

The **Rat-Tailed Stopper Knot** controls a Mooring Line while a ship is docking: it temporarily takes the load while a Mooring Line is transferred from the Winch to the Bitts. The knot described here is the double-ended version. The center of the stopper line is secured to the Bitts – often an eye at the base of the Bitts. The Rat-Tailed Stopper Knot itself commences with a Half Knot tied around the mooring line before starting the double spiral
